## HW1

## 50pts

## Posted Friday, September 2, 2022 Due Friday, September 16, 2022

Note: Lecture 2 covers material for problems 1-3. Lectures 3 and 4 cover problems 4-5.

**Problem 1** (10pts). Describe in English the languages denoted by the following regular expressions.

- (a)  $(2pts) a(a|b)^*a$
- (b) (2pts)  $(b^*(\epsilon|a))^*$
- (c) (2pts) (a|b)\*a(a|b) (a|b)
- (d) (2pts) a\*ba\*ba\*ba\*
- (e) (2pts)  $(aa|bb)^*((ab|ba)(aa|bb)^*(ab|ba)(aa|bb)^*)^*$

Note: Your description should be the most general high-level characterization. For example, (ba\*ba\*)\* should be described as "All strips of a sand b's beginning with hand having even number of bs." not as got example, The string of the lowed by any number of a stollowed by a b followed by any number of a's, repeated any number of times.".

Problem 2 (10pts). The following grammar generates numbers in binary notation. C is the start symbol.

- (1)  $C \to C \ 0 \ | \ A \ 1 \ | \ 0$
- (2)  $A \to B \ 0 \ | \ C \ 1 \ | \ 1$
- $(3) \xrightarrow{B \to A} \xrightarrow{0} |B| \xrightarrow{1} Add$  WeChat powcoder
- (a)(2pts) Construct a derivation that generates the binary notation of 21.
- (b)(4pts) Prove that the generated numbers are multiples of 3.
- (c)(4pts) Prove that all such numbers are generated by the grammar.

Note: To receive full credit your answer must set up a proof and clearly state the key steps/arguments. Be concise and use mathematical notation instead of prose as much as possible. Overly verbose answers may incur a penalty.

**Problem 3** (10pts). The following is an ambiguous expression grammar with one unary operator \* and n binary infix operators,  $\theta_1, \theta_2, ..., \theta_n$ , at n different levels of precedence:

$$expr o expr heta_1 \ expr \mid expr \mid \theta_2 \ expr \mid \dots \mid expr heta_n \ expr \mid expr^* \mid (expr) \mid id$$

- (a) (2pts) Show that the grammar is ambiguous.
- (b) (8pts) Construct an equivalent unambiguous grammar such that binary operators  $\theta_1, \theta_2, ..., \theta_n$ are all left-associative. Unary operator \* has the highest precedence.  $\theta_n$  has precedence over  $\theta_{n-1}$ ,  $\theta_{n-1}$  has precedence over  $\theta_{n-2}$  and so on, and  $\theta_1$  has the lowest precedence.

**Problem 4** (10pts). Consider the following LL(1) grammar for a simplified subset of Lisp:

$$\begin{array}{lll} P & \rightarrow & E \$\$ \\ E & \rightarrow & \mathsf{atom} \\ E & \rightarrow & 'E \\ E & \rightarrow & (EEs) \\ Es & \rightarrow & EEs \\ Es & \rightarrow & \epsilon \end{array}$$

atom,  $\dot{}$ , (, ), and \$\$ are the terminals (tokens), and P, E and Es are the nonterminals.

- (a) (3pts) What is FOLLOW(Es)? FOLLOW(E)? PREDICT(Es  $\rightarrow \epsilon$ )?
- (b) (3pts) Give a parse tree for the string (cdr '(a b c)) \$\$. Note: keyword cdr and identifiers a, b, and c are atoms.
- (c) (4pts) Consider a recursive descent parser running on the same input. At the point where the quote token (') is matched, which recursive descent routines will be active (i.e., what routines will have a frame on the run-time stack)?

**Problem 5** (10pts). For each grammar below, determine if it is LL(1) or not and if it is ambiguous of 100.5 for 10 no weed to justify for carswer Ast Vide TESCA NO. As an example of the format for answers we are looking for: (x) LL(1): YES, Ambiguous: YES.

- (a) (2pts)  $A \to 0 \ A \ 1 \mid 0 \ 1$
- $_{(b)\ (2pts)\ A \rightarrow +\ A\ A\ |}$  https://powcoder.com
- (c) (2pts)  $A \rightarrow A$  ( A )  $A \mid \epsilon$
- (d) (2pts)  $A \rightarrow B$  a | b B c and decrease where  $A \rightarrow B$  a | b B c and  $A \rightarrow B$  a | b B c and  $A \rightarrow B$  a | b B c and  $A \rightarrow B$  a | b B c and  $A \rightarrow B$  a | b B c and  $A \rightarrow B$  a | b B c and  $A \rightarrow B$  a | b B c and  $A \rightarrow B$  a | b B c and  $A \rightarrow B$  a | b B c and  $A \rightarrow B$  a | b B c and  $A \rightarrow B$  a | b B c and  $A \rightarrow B$  a | b B c and  $A \rightarrow B$  a | b B c and  $A \rightarrow B$  a | b B c and  $A \rightarrow B$  a | b B c and  $A \rightarrow B$  a | b B c and  $A \rightarrow B$  a | b B c and  $A \rightarrow B$  a | b B c and  $A \rightarrow B$  a | b B c and  $A \rightarrow B$  a | b B c and  $A \rightarrow B$  a | b B c and  $A \rightarrow B$  a | b B c and  $A \rightarrow B$  a | b B c and  $A \rightarrow B$  a | b B c and  $A \rightarrow B$  a | b B c and  $A \rightarrow B$  a | b B c and  $A \rightarrow B$  a | b B c and  $A \rightarrow B$  a | b B c and  $A \rightarrow B$  a | b B c and  $A \rightarrow B$  a | b B c and  $A \rightarrow B$  a | b B c and  $A \rightarrow B$  a | b B c and  $A \rightarrow B$  a | b B c and  $A \rightarrow B$  a | b B c and  $A \rightarrow B$  a | b B c and  $A \rightarrow B$  a | b B c and  $A \rightarrow B$  a | b B c and  $A \rightarrow B$  a | b B c and  $A \rightarrow B$  a | b B c and  $A \rightarrow B$  a | b B c and  $A \rightarrow B$  a | b B c and  $A \rightarrow B$  a | b B c and  $A \rightarrow B$  a | b B c and  $A \rightarrow B$  a | b B c and  $A \rightarrow B$  a | b B c and  $A \rightarrow B$  a | b B c and  $A \rightarrow B$  a | b B c and  $A \rightarrow B$  a | b B c and  $A \rightarrow B$  a | b B c and  $A \rightarrow B$  a | b B c and  $A \rightarrow B$  a | b B c and  $A \rightarrow B$  a | b B c and  $A \rightarrow B$  a | b B c and  $A \rightarrow B$  a | b B c and  $A \rightarrow B$  a | b B c and  $A \rightarrow B$  a | b B c and  $A \rightarrow B$  a | b B c and  $A \rightarrow B$  a | b B c and  $A \rightarrow B$  a | b B c and  $A \rightarrow B$  a | b B c and  $A \rightarrow B$  a | b B c and  $A \rightarrow B$  a | b B c and  $A \rightarrow B$  a | b B c and  $A \rightarrow B$  a | b B c and  $A \rightarrow B$  a | b B c and  $A \rightarrow B$  a | b B c and  $A \rightarrow B$  a | b B c and  $A \rightarrow B$  a | b B c and  $A \rightarrow B$  a | b B c and  $A \rightarrow B$  a | b B c and  $A \rightarrow B$  a | b B c and  $A \rightarrow B$  a | b B c and  $A \rightarrow B$  a | b B c and  $A \rightarrow B$  a | b B c and  $A \rightarrow B$  a | b B c and  $A \rightarrow B$  a | b B c and  $A \rightarrow B$  a | b B c and  $A \rightarrow B$  a | b B c and  $A \rightarrow B$  a | b B c and  $A \rightarrow B$  a | b B c and  $A \rightarrow B$  a | b B c and  $A \rightarrow B$  a | b B c and  $A \rightarrow B$  a | b B c and A
- (e) (2pts)  $S \to CaCb \mid DbDa$   $C \to \epsilon$  $D \to \epsilon$
